

500W Single Output with PFC Function

USP-500 series

Features :

- Universal AC input / Full range
- Built in active PFC circuit compliance to EN61000-3-2
- Protections: Short circuit / Overload / Over voltage / Over temperature
- Free air convection for 400W and 500W with 23.5CFM forced air
- High power density 6.2w/in³
- · AC input active surge current limiting
- U-bracket low profile:41mm
- Current sharing(1+1) for 24V and 48V models (Optional)
- Built-in remote ON-OFF control
- Built-in remote sense function
- Built in DC OK active signal
- 3 years warranty

USP-500 series

Function Description of CN50

Pin No.	Function	Description
1		Current sharing signal. When units are connected in parallel, the CS pins of the units should be connected to allow current balance between units.
2,8	-S	Negative sensing. The -S signal should be connected to the negative terminal of the load. The -S and +S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V.
3	RC-	Return for RC+ signal input.
4	RC+	Turns the output on and off by electrical or dry contact between pin 4 (RC+) and pin 3 (RC-). 0~0.8V: Power ON, 4~10V: Power OFF.
5	GND	This pin connects to the negative terminal (-V). Return for DC_OK signal output.
6	DC-OK	DC-OK signal is a TTL level signal, referenced to pin6(DC-OK GND). High when PSU turns on.
7	+S	Positive sensing. The +S signal should be connected to the positive terminal of the load. The +S and -S leads should be twisted in pair to minimize noise pick-up effect. The maximum line drop compensation is 0.5V.

Function Manual

1.Remote Control

The PSU can be turned ON/OFF by using the "Remote Control" function.

Between RC+(pin4) and RC-(pin3)	Output Status
SW OFF (0 ~ 0.8V)	ON
SW ON (4 ~ 10V)	OFF

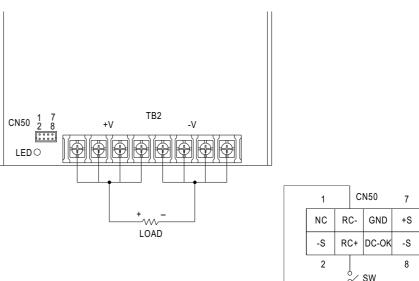

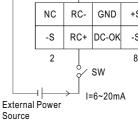

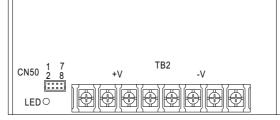

Fig 1.1

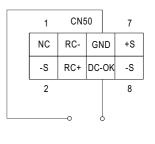

2.DC-OK Signal

DC-OK signal is a TTL level signal. High when PSU turns on.

Between DC-OK(pin6) and GND(pin5)	Output Status
3.3 ~ 5.6V	ON
0 ~ 1V	OFF

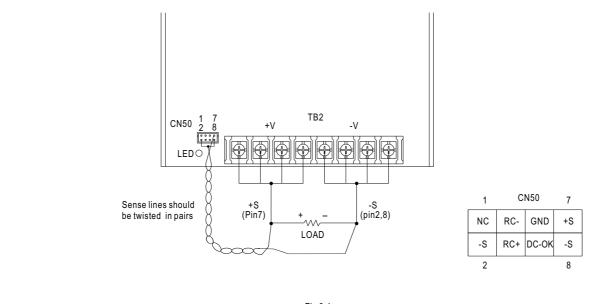

3.Remote Sense

The remote sensing compensates voltage drop on the load wiring up to 0.5V.

4. Current Sharing with Remote Sensing (Optional for 24V & 48V)

USP-500 has the built-in active current sharing function and can be connected in parallel to provide higher output power :

(1)Parallel operation is available by connecting the units shown as below.

(+S,-S,CS and GND are connected mutually in parallel).

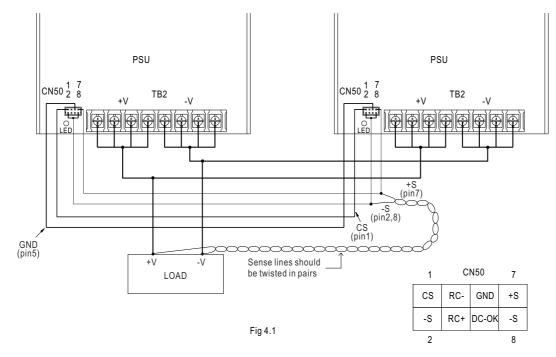

(2)Difference of output voltages among parallel units should be less than 2%.

(3)The total output current must not exceed the value determined by the following equation.

(output current at parallel operation)=(Rated current per unit)×(Number of unit)×0.9

(4) In parallel operation 2 units is the maximum, please consult the manufacturer for applications of more connecting in parallel.

(5) The power supplies should be paralleled using short and large diameter wiring and then connected to the load.

Note : 1.In parallel connection, maybe only one unit (master) operate if the total output load is less than 2% of rated load condition. The other PSU (slave) may go into standby mode and its output LED and relay will not turn on.

^{2.2%} min. of dummy load is required.
